SUMMARY

Full-stack .NET developer who designs SQL Server schemas, builds secured ASP.NET Core Web APIs with clean layered architecture, and ships the React frontends on top. Delivered a production e-commerce and ERP platform as the sole developer, and builds accounting software with database-enforced integrity. Currently a Full-Stack Developer at the change cue, with Microsoft Dynamics 365 F&O training from Al Fahad Holding.

EXPERIENCE

Full-Stack Developer, the change cue (Remote, Paid Internship) **Sep 2026 – Present**

- Architecting a system designed to scale to thousands of CX maturity assessments, coordinating the main backend with a dedicated Python AI microservice.
- Building REST APIs and React interfaces end to end; designing relational schemas on AWS RDS with complex many-to-many relationships.
- Deploying and operating services with Docker, Redis and AWS cloud infrastructure.

ERP Trainee (Microsoft Dynamics 365 F&O), Al Fahad Holding Company, Riyadh **Aug 2026 – Sep 2026**

- Trained on Dynamics 365 Finance & Operations configuration and finance/operations workflows across a multi-subsidiary group.

Full-Stack .NET Developer Intern, True Time Solution **Jun 2025 – Dec 2025**

- Sole developer of a production e-commerce and ERP platform; designed and implemented 40+ RESTful endpoints in ASP.NET Core Web API on a 3-layer N-Tier architecture (presentation, business logic, data access).
- Modeled a 12-table SQL Server schema and built the data layer with Entity Framework Core and LINQ for filtering, aggregation and reporting.
- Applied the Repository Pattern with dependency injection across all 12 entities, reducing duplicated query code by about 30%.
- Secured the API with JWT authentication and role-based authorization for 3 roles (Admin, Seller, Customer).
- Built a 10-screen responsive React frontend and migrated its build to Vite, cutting build time by about 40%.

Full-Stack Developer, Graduation Project, An-Najah National University **Feb 2025 – Jun 2025**

- Built an e-learning platform for 4 user roles with REST APIs over a 23-table MySQL schema, React and React Native clients, and OpenAI-generated quizzes.

PROJECTS

Markaz: ERP and Accounting Platform for the Saudi Market **2026 – Present**

NestJS, TypeScript, PostgreSQL, Prisma, React, Redis, BullMQ, Docker, GitHub Actions

- Double-entry ledger whose integrity is enforced in the database: deferred triggers require debits to equal credits at commit and block posting into closed periods.
- Append-only audit log through a restricted database role, JWT with refresh-token rotation and reuse detection, outbox pattern, and property-based ledger tests in CI.

KAShop: E-Commerce Backend **2025**

- Layered ASP.NET Core backend (DAL/BLL/PL) with Entity Framework Core, SQL Server and Mapster object mapping.

SaudiPlot AI: Villa Design Assistant (Kanz AI Hackathon 2026, Gold) **Jul 2026**

- Multi-agent LangGraph system recommending villa designs under Saudi building regulations; FastAPI, PostGIS and a bilingual React frontend.

TECHNICAL SKILLS

.NET: C#, ASP.NET Core Web API, Entity Framework Core, LINQ, AutoMapper, Mapster
Architecture: N-Tier / Layered Architecture, Repository Pattern, Dependency Injection, SOLID, DTOs, REST, OpenAPI/Swagger
Databases: SQL Server, PostgreSQL, MySQL, Redis
Frontend: React, TypeScript, JavaScript, React Native, Tailwind CSS, Vite
Cloud and DevOps: AWS (RDS), Docker, GitHub Actions CI/CD, Git
Also: Node.js, NestJS, Express.js, JWT, RBAC, Microsoft Dynamics 365 F&O

EDUCATION AND CERTIFICATIONS

B.Eng. Computer Engineering, An-Najah National University **2021 – 2026**

Full-Stack Web Development (200h), Knowledge Academy, 2025 | AI/Machine Learning (60h), The Hope International, 2026
Gold AI Showcase certificate, Kanz AI Hackathon 2026 | **Languages:** Arabic (native), English (professional)
