SUMMARY

Full-stack engineer who builds production systems end to end: relational schema, REST API, React interface and Docker deployment. Currently a Full-Stack Developer at the change cue, building an AI-driven CX assessment platform (Node.js with a Python AI microservice on AWS), and building Markaz, a NestJS and PostgreSQL ERP product for the Saudi market. Gold AI Showcase certificate at the Kanz AI Hackathon 2026 (100,000 participants).

EXPERIENCE

Full-Stack Developer, the change cue (Remote, Paid Internship) **Sep 2026 – Present**

- Architecting a system designed to scale to thousands of CX maturity assessments, coordinating a Node.js backend with a dedicated Python AI microservice.
- Building Node.js/Express REST endpoints and the React interfaces that consume them, tested end to end.
- Designing relational database schemas on AWS RDS with complex many-to-many relationships.
- Integrating external AI services; deploying and operating services with Docker, Redis and AWS cloud infrastructure.

ERP Trainee (Microsoft Dynamics 365 F&O), Al Fahad Holding Company, Riyadh **Aug 2026 – Sep 2026**

- Trained on Dynamics 365 Finance & Operations configuration and finance/operations workflows across a multi-subsidiary group.

Full-Stack Developer Intern, True Time Solution **Jun 2025 – Dec 2025**

- Sole developer of a production e-commerce and ERP platform: 12-table SQL Server schema, 40+ REST endpoints in ASP.NET Core and a 10-screen responsive React frontend.
- Applied N-Tier architecture with the Repository Pattern and dependency injection, reducing duplicated data-access code by about 30%.
- Implemented JWT authentication with role-based authorization for 3 roles; migrated the frontend build to Vite, cutting build time by about 40%.

Full-Stack Developer, Graduation Project, An-Najah National University **Feb 2025 – Jun 2025**

- Built an e-learning platform for 4 roles: Node.js/Express APIs over a 23-table MySQL schema, React and React Native clients, and OpenAI-generated quizzes from course content.

PROJECTS

Markaz: ERP and Accounting Platform for the Saudi Market **2026 – Present**

NestJS, TypeScript, PostgreSQL, Prisma, React, Redis, BullMQ, Docker, GitHub Actions

- Modular-monolith monorepo with a double-entry ledger whose integrity is enforced in PostgreSQL: deferred triggers require debits to equal credits at commit and block posting into closed periods.
- JWT with refresh-token rotation and reuse detection, append-only audit log, outbox pattern, background jobs, bilingual Arabic/English RTL UI, and property-based ledger tests in CI.

SaudiPlot AI: Villa Design Assistant (Kanz AI Hackathon 2026, Gold) **Jul 2026**

React 19, LangGraph, FastAPI, PostgreSQL/PostGIS, Supabase, Stripe

- Multi-agent system recommending villa designs from a plot deed under Saudi building regulations; bilingual React frontend with 3D results, maps and Stripe checkout.

Dental Clinic Management System (live) **2026**

React, Zustand, Node.js/Express, PostgreSQL (Supabase), Cloudinary, Resend

- Patients, appointments, X-ray and document storage, and automated email reminders for a dentist operating two clinics.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, C#, Python, SQL
Backend: Node.js, NestJS, Express.js, ASP.NET Core, REST APIs, OpenAPI/Swagger, WebSockets/Socket.IO, JWT, RBAC
Frontend: React, React Native, Vite, Tailwind CSS, Zustand, HTML5, CSS3, i18n/RTL
Databases: PostgreSQL, MySQL, SQL Server, MongoDB, Prisma, Sequelize, Redis
Cloud and DevOps: Docker, AWS (RDS), GitHub Actions CI/CD, Vercel, Railway, Supabase, Git
AI and Integrations: OpenAI API, LangGraph, Stripe, Cloudinary

EDUCATION AND CERTIFICATIONS

B.Eng. Computer Engineering, An-Najah National University **2021 – 2026**

Full-Stack Web Development (200h), Knowledge Academy, 2025 | AI/Machine Learning (60h), The Hope International, 2026
Languages: Arabic (native), English (professional)
